Welcome to BP®.

A passion for quality.

Many people say that we are a bit crazy here at BP®. Why? Just because we do our utmost to achieve an extraordinary level of perfection and are passionate about innovation? Because we promise incredible quality and we deliver? Or because we are obsessed with great workwear solutions? Or rather because we are genuinely committed to sustainability as a task for our generation, and not just posturing?

Well, maybe we are crazy – for work clothing that is perfectly tailored to the needs of the people who wear it. For those who wear our clothes every day. For those who, like us, give their work their all.

The fact that we're crazy is nothing new. Since 1788, we here at BP® have worked according to the principle that the optimum

clothing solutions are created when they are developed and produced with passion.

This quality claim can be seen and felt: in craftsmanship trades, in gastronomy and in industrial and medical fields. Work clothing that makes the everyday work of our wearers that little bit easier.

Made by people who work like crazy every day all over the world to ensure that our clothing is produced according to this sustainable BP® quality.

On the following pages, you will learn more about our company, our values and our comprehensive product range.

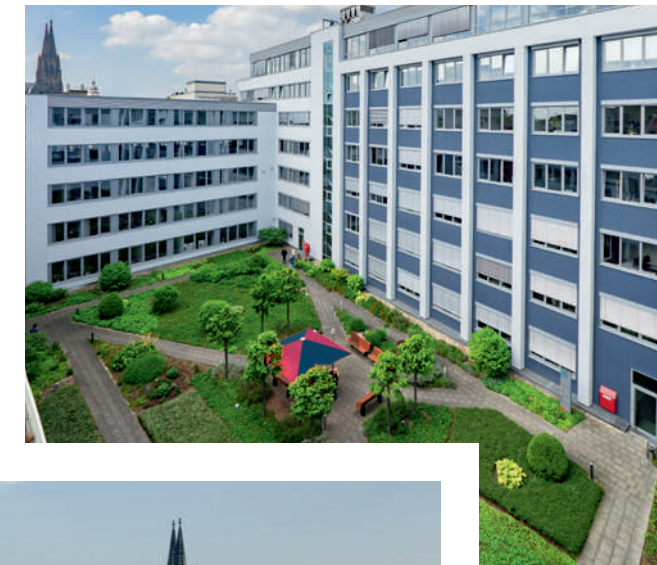

At the heart of it all ...

... within sight of Cologne Cathedral and the main railway station: This particularly urban location is a true melting pot for everyone who is crazy about quality and sustainability and all of the dedicated, highly professional employees that round out our special team here at BP®.

The BP® headquarters,
in the heart of Cologne's city centre.

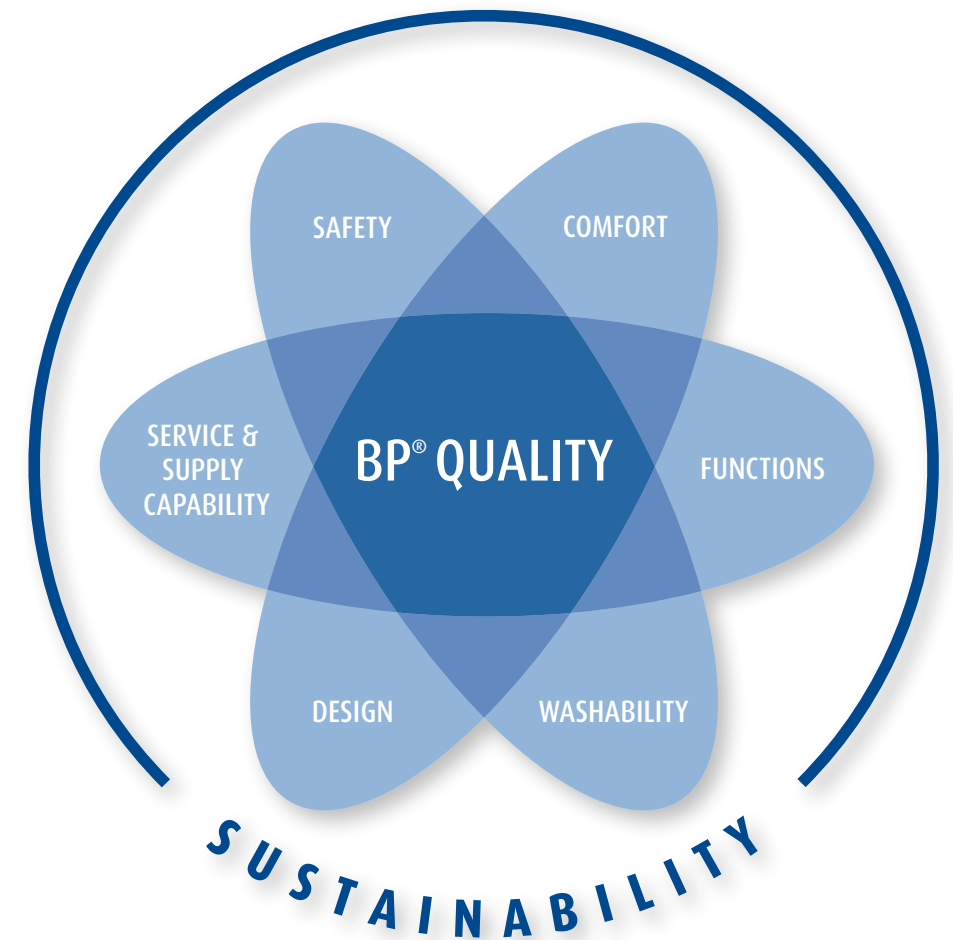

Our trademark through
the ages: shaping working
environments since 1788.

Our commitment.

Workwear that meets the highest demands – day after day.

At the heart of our commitment lies **BP® quality** – the core of our workwear (page 10).

It is defined by six key factors:

- **Design** (page 11)
- **Safety** (page 12)
- **Functions** (page 13)
- **Washability** (page 14)
- **Comfort** (page 15)
- **Service & Supply capability** (page 16)

This promise of quality is framed by our comprehensive **commitment to sustainability** (page 17), which runs through all aspects of our actions and our products.

BP® quality.

We place the highest demands on the quality of our workwear and promise our customers highly durable products that deliver excellent performance.

Our commitment to quality begins with the selection of raw materials, continues throughout the entire manufacturing process and does not end when the product reaches our customers. We work to the highest standards and thoroughly test our products in our in-house testing laboratory.

With a keen eye and technology that overlooks nothing: in the BP® testing laboratory, fabrics and seams are tested for maximum durability, including pressure tests.

The BP® identity

- 1. Customer focus**
 Our customers and wearers are always at centre of our business. We offer professional clothing solutions and services that live up to the BP® "feel the difference" claim.
- 2. Continuous improvement and innovation**
 We use the highest standards in innovation to continuously improve our company as well as our products and services, and, in doing so, we always keep the needs of our customers and wearers in mind.
- 3. Excellence**
 We deliver excellent company performance and results by showing initiative and a readiness to accept responsibility, providing mutual support and constantly learning from one another.
- 4. Transparency and trust**
 We cultivate a relationship of trust, based on openness, transparency and honesty, with our customers, our suppliers, our investors, everyone who wears our products, and also within BP® itself.
- 5. Sustainability**
 We create sustainable values for the people we work with. Economic success equips us for the future. We stand for fair working conditions and use natural resources responsibly.
- 6. Teamwork, diversity and personal development**
 We love working in teams and do it well. We respect and affirm diversity. We create space for personal development.

www.bp-online.com
BIERBAUM-PROENEN. SINCE 1788.

The heart of our quality: the BP® identity.

The quality of our products is no coincidence. It grows from conviction, attitude and genuine passion.

Our BP® identity provides direction and drive – it shapes how we think, develop and act. It is present in every detail: from the first design to the final stitch. This is how BP® quality becomes a lived brand promise.

Hand testing: stretch material is tested for four-way stretch. Anything that does not feel right fails.

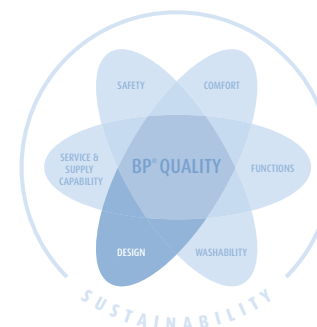

BP® clothing fits perfectly and offers full freedom of movement – naturally also in women's fits.

"We love making everyday working life easier for the wearers with sporty yet professional designs, ergonomic cuts, functional details and contemporary colours. What could be better than seeing the people we develop workwear for feel truly comfortable in it? Wearing the clothing for a long time and with pleasure?"

Philo, BP® Development Team

The BP® team is in constant dialogue with the people who wear our clothing. This results in designs that look good, noticeably make everyday work easier and are both authentic and professional.

BP® design.

All-round perfection: 3D simulations from the digital design process

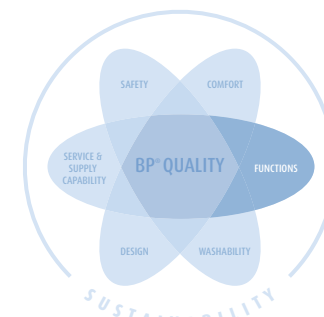

When it comes to safety in everyday working life, there can be no compromises – in extreme cases, it can be a matter of life and death.

Anyone who chooses BP® clothing is on the safe side. All products are certified in accordance with the applicable standards.

We use high-tech fabric blends to ensure that, despite maximum protection, wearing comfort is never compromised.

BP® functions.

BP® safety.

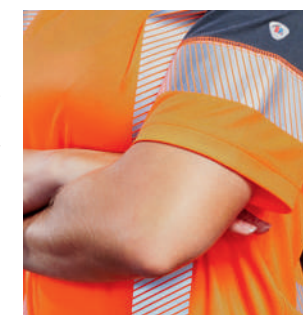

Sometimes it is the small functional details that make a big difference. These can be pockets positioned exactly where wearers intuitively expect them. They can be segmented reflective strips that are patched on rather than sewn on, making the garment lighter and increasing freedom of movement. They can be sleeve cuffs with integrated knitted inner cuffs that prevent cold wind or dirt from entering the sleeve. Adjustable hoods that allow a full 180° field of vision, or ruler pockets sewn down on one side and mobile phones.

All of these functions have one thing in common: they create a tangible difference and make everyday work noticeably easier.

Detachable hood with double width adjustment

Segmented reflective strips for greater freedom of movement – naturally suitable for industrial laundering

Sleeve cuff with knitted cuff

Ruler pocket sewn down on one side

Stretch comfort for maximum freedom of movement

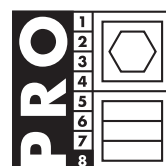

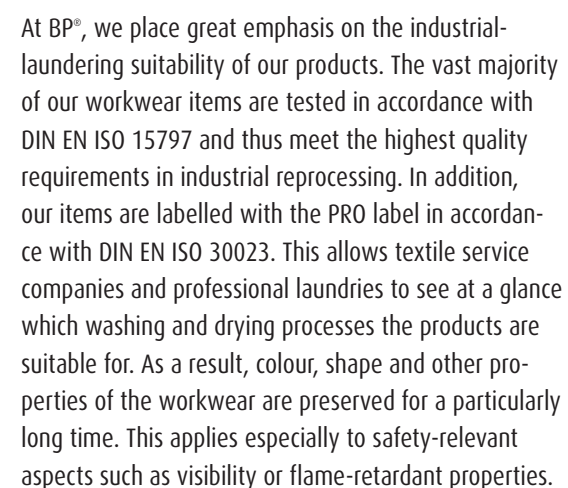

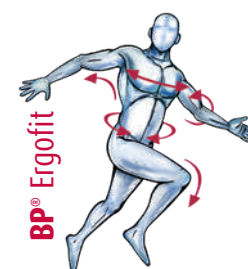

Industrial laundering represents a true stress test for workwear. Its mechanical, thermal and chemical loads cannot be compared with those of conventional household washing. Textiles therefore need to be highly durable.

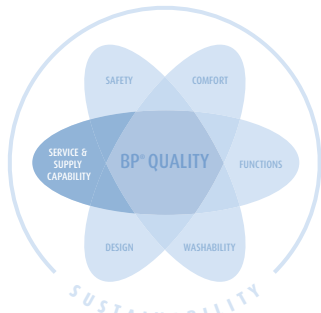

The best workwear is the kind you barely notice – even during intensive movement.

To consistently offer the best workwear, we conduct extensive research and continuously develop new solutions – always in close dialogue with the wearers.

BP® service & supply capability.

Our services are 100% customer-centric, with a strong focus on above-average delivery capability and delivery reliability. Despite our wide product range, we ensure stock availability of over 95% as well as fast and dependable shipping.

At the same time, close exchange with our customers and personal consultation naturally hold a particularly high priority for us.

With smart digital solutions, we guarantee fast and smooth processes for our customers. Our digital BP® dealer portal as well as our system

for electronic data interchange (EDI) enable automated and direct exchange of orders and information. As a result, our customers benefit from shorter processing and delivery times, improved process quality and greater transparency. Digital design processes and sampling have long been standard practice for us.

Put us to the test when it comes to truly lived customer service – for example in the following areas:

- **personal protective equipment**
- **customisation**
- **clothing concepts & training**
- **sustainability**

In these and many other areas, we are happy to support you with advice and practical assistance.

Advising us on sustainability issues since 2025:
Karsten Schwanke, a well-known meteorologist from the German media and a committed climate expert.

BP® was founded in 1788 and is now managed by the seventh generation. We think and act across generations, which is why the principle of long-term orientation is firmly anchored in our DNA.

The partnerships we maintain with our suppliers and other companies are also designed for the long term – and, of course, based on trust – because only in this way can, for example, social standards be continuously improved. A fine example of such a long-standing partnership is our relationship with our VETRA® facility in Tunisia, which was able to celebrate its 30th anniversary this year. We are proud and delighted that many of the Tunisian employees have been part of the company since the factory was founded. We have also been working with many other production partners for decades, which pays off not least in the area of sustainability.

From our perspective, our greatest contribution to ecological sustainability is BP® quality. The longer a BP® product can be worn, the fewer valuable resources are consumed. Durable products can therefore make a decisive contribution to sustainability.

By the way: since 2022, we have been calculating the CO₂ emissions for our Cologne site. These calculations help us implement and define our sustainability goals.

BP® sustainability.

Since 2010, BP® has been a member of the multi-stakeholder initiative Fair Wear Foundation as the first German manufacturer of workwear. The aim of the Fair Wear Foundation is to improve working conditions for people employed in the international garment industry.

Both we and our production partners are regularly audited by the Fair Wear Foundation. BP® has already been awarded the status of "Fair Wear Leader" eleven times in a row.

BP® Sustainability Report 2024:

Alex Slotnikow,
BP® product
manager

Comfort and lightness? **BP® stretch.**

**Freedom of movement is not a luxury. It is a prerequisite.
BP® product manager Alex Slotnikow explains why.**

Alex, how did stretch become such an important topic at BP®?

It didn't happen overnight – we've been observing this development for several years, and it has become more relevant with each passing year. The main impulse came from everyday private life: the comfort people know from leisurewear is now also expected in workwear. Many wearers told us that classic materials often restrict movement. The desire for greater flexibility and freedom of movement became increasingly clear – and stretch was the logical response.

What was the first moment when you realised: "This really makes a difference for the wearers"?

During a practical test, a tradesperson knelt down, stretched, moved completely freely and simply said: "Finally, I don't have to feel my clothing anymore." That really touched me. At that moment, I knew we were on the right track.

How do you ensure that the clothing really works in everyday use?

We bring real professionals on board: tradespeople, chefs and care staff who test our prototypes for days

on end. Their feedback is incredibly valuable and flows directly into further development. That's the only way to create clothing that proves itself in real life.

What specifically sets BP® stretch products apart from other workwear?

We use stretch in a very targeted way – exactly where freedom of movement is needed. At the same time, we pay attention to lightness, shape retention and skin-friendly materials. Our fabrics are not only comfortable; they also keep their promises even after many washes.

Which professional groups do you focus on most during development?

Clearly: crafts, industry and care. These are areas with different requirements – but all need clothing that moves with every motion. What matters to us is that the cuts fit well, the materials perform and the comfort is truly noticeable.

Will stretch become the standard in workwear in the future?

I'm convinced of it. Comfort is not a trend, it's an expectation. Once someone has worn stretch, they don't want anything else – and that will extend across all industries.

What personally motivates you when developing such products?

When I see that people really feel comfortable in our clothing and can do their jobs better and with more passion because of it. That's the greatest motivation.

Alex, thank you very much for your answers.

Safety with BP®: page 24

Hygiene with BP®: page 170

Enjoyment with BP®: page 186

Worklife stories with BP®.

We accompanied wearers of BP® workwear for a day and experienced not only the passion with which these people master their working day, but also how our clothing stands up to the daily challenges of a wide variety of professions.

Lightness, sporty-modern design and certified protection in accordance with APC 1 and 2: perfectly suited for everyone who works under voltage – for example in energy supply, industry, crafts or network infrastructure.

Maximum safety through fluorescent materials and reflective strips – combined with a high level of freedom of movement: ideal for work in road construction, utility trenching, railway construction, transport or waste management.

Multi-standard protection
64

Welder protection
96

Welding with noticeable comfort: protective clothing that makes working with hot metals, electric arcs and gases significantly more comfortable. For applications such as steel and metal construction, mechanical and plant engineering, the automotive industry or the trades.

BP[®] HI-VIS STRETCH 26

The innovative combination of hi-vis protection and freedom of movement – sporty and flexible in every situation.

BP[®] HI-VIS COMFORT 40

Hi-vis protection plus comfort for all weathers.

BP[®] HI-VIS PROTECT 60

Multi-standard protection with all-round visibility.

BP[®] MULTI PROTECT PLUS 64

Light wearing comfort, sporty design and reliable multi-standard protection – also available in women's fits.

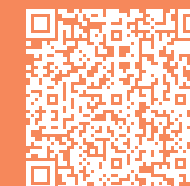

BP[®] MULTI PROTECT 88

Proven multi-standard protection for many applications: safe, robust and comfortable.

BP[®] WELDER'S COMFORT 96

Comfortable welding protection that offers noticeably more freedom of movement.

We put sustainability on track.

Why the rail workers at **DB Cargo** wear the new Hi-Vis Stretch high-visibility clothing from BP®.

Jennifer is wearing the BP® high-visibility stretch jacket 2042 (see page 27) and the BP® high-visibility stretch trousers 2046 (see page 29).

The most sustainable option, of course, is not having to transport goods at all. Right after that comes rail freight transport. Two people who work every day to ensure that goods reach their destination efficiently, safely and in a climate-friendly way are Jennifer Herb and Michel Konermann, shunting assistants at **DB Cargo in Wanne-Eickel**. Their workplace: the marshalling yard. Their task: setting tonnes-heavy trains in motion – precisely, reliably, in all weather conditions and across changing shifts. It is a job that requires strength and mental agility. And one in which you have to be seen – both literally and figuratively.

The two check brakes, inspect running gear, couple and uncouple freight wagons and coordinate operations with the locomotive drivers via radio. A moment of inattention can have serious consequences here. Every move has to be right. The distances between the tracks are long, the ground is often slippery, the environment loud. “You always have to keep an eye on everything – in front of you, beside you, above you,” says Michel. Visibility is not just a safety factor – it is vital for survival.

That is why Michel and Jennifer wear Hi-Vis Stretch, the new high-visibility clothing from BP®, which not only stands out but also thinks along with you. Jennifer pulls up the zip of her jacket and nestles

her chin into the soft fleece collar. “The clothing is easy to see in any light – even in the haze of the early shift.” But what she particularly appreciates is the freedom of movement. The stretch component moves with every motion – bending, climbing, turning – without pulling or restricting. “The clothing is kind to me, like another colleague,” she says with a laugh.

The fabric is robust yet comfortable to wear – and a reliable partner in wind, rain, frost or 30 degrees in the shade. “In the past, high-visibility clothing was rather stiff and heavy. Today we feel like people in it, not like machines,” says Michel as he ducks under a buffer to release a coupling. The grip is secure, the movement routine.

Small ideas with a big impact.

“I also really like the details!” says Jennifer, referring to the windproof cuffs made of soft microfleece at the sleeves and the closable pockets that keep everything securely in place, even when climbing. “The large pocket on the leg for my gloves – someone really put thought into that!” Michel also appreciates many features, such as the soft fabric and the ventilation openings on the knee pad pockets.

“Back in the 1980s, everyone here wore black work suits,” says site manager André Wiechert. “That came from the tradition of working on

steam locomotives, from a time full of soot and coal. Since then, a lot has changed – visibility and safety are now top priorities here.”

Even though the railway system functions like a huge set of gears, nothing would run without people like Jennifer and Michel. And even if their work often remains behind the scenes, with BP® they remain sustainably visible.

DB Cargo is Europe's largest rail freight company and the backbone of climate-friendly rail freight transport. With a widely branched network and more than 20,000 wagon movements every day, the company ensures that goods reach their destination reliably and sustainably – across Germany and Europe. As part of the DB Group, DB Cargo stands for innovation and responsibility in the logistics industry. The focus is on shifting transport to environmentally friendly rail. With modern locomotives, digitally controlled shunting operations and dedicated employees, DB Cargo is a key player in the mobility transition – powerful, visible and future-oriented.

BP® Hi-Vis Stretch.

Safety through visibility
and wearing comfort thanks to
stretch – our solution
for all weather conditions.

Our BP® Hi-Vis Stretch collection is the
ideal high-visibility clothing for outdoor
work under demanding conditions, such
as in road construction, utility trenching,
transport or waste management.

It ensures good visibility even in
changing weather conditions and,
thanks to innovative BP® Hi-Vis Stretch
fabric, offers even greater comfort and
freedom of movement.

The BP® BodyLanguage.

The reflective material on our high-visibility clothing is
applied according to the “BP® BodyLanguage” principle.
This means that the retroreflective material outlines the
body silhouette of the wearers. As a result, a high level of
all-round visibility of the wearers – including from above –
is achieved in the dark.

Further information on “BP® BodyLanguage” can be found
in the glossary on page 240.

protection.

EN ISO 20471

High visibility – perfected by BP®.

Play it safe. Make yourself seen.

When it comes to visibility: more is more! The greater the area of the clothing that is covered with fluorescent or retro-reflective materials, the sooner and better you will be seen by others. And it's not just at night – BP® Hi-Vis Comfort enhances personal safety, even in situations with poor visibility, such as dusk, rain, snow or fog.

The BP® Hi-Vis Stretch and BP® Hi-Vis Comfort collections enhance your safety through the use of smart materials and can be flexibly combined with each other. To help you find the right equipment for every requirement, this overview shows which combinations achieve which high-visibility protection class according to EN ISO 20471 – for your maximum visibility.

The high-visibility protection classes in combination.

High-visibility protection classes 2 and 3 can be easily achieved by combining BP® Hi-Vis Stretch and BP® Hi-Vis Comfort items. This ensures optimum visibility depending on the area of application.

Products that already meet class 3 on their own are not listed in the overview. Combining two products that each meet high-visibility protection class 3 does not result in a higher class than class 3 overall.

BP® Hi-Vis Comfort.

Hi-vis protection plus comfort for all weathers.

This collection offers optimum visibility by day and night, combined with a perfect fit, intelligent material combinations and a high level of wearing comfort – throughout the entire working day.

In addition, practical weather-protection items provide reliable protection against rain, snow and wind, while warming garments ensure comfortable working even at low temperatures.

With this collection, you are perfectly equipped at all times.

BP® BodyLanguage

360° Visibility

Play it safe.
Make yourself seen.

The BP® BodyLanguage.

The reflective material on our high-visibility clothing is applied according to the “BP® BodyLanguage” principle. This means that the retroreflective material outlines the body silhouette of the wearers. As a result, a high level of all-round visibility of the wearers – including from above – is achieved in the dark.

Further information on “BP® BodyLanguage” can be found in the glossary on page 240.

The BP® innovation for enhanced visibility.

Visible. Safe. Smart.

Our new T-shirts comply with the requirements of **EN 17353:2020 Type A** and offer enhanced visibility in everyday medium-risk situations at work. The fluorescent material ensures good visibility in all daylight conditions. Take a look at our certified professional clothing and discover protection and comfort combined!

BP® T-shirts for high visibility.

Our high-visibility T-shirts are certified according to EN ISO 20471 and ensure high visibility by day and night. The fluorescent fabric and the all-around reflective strips increase safety even in challenging lighting conditions.

The T-shirts are robust, suitable for industrial laundering and combine tested protection with comfortable wear – ideal for all work areas with a high level of risk.

BP® Multi Protect Plus.

Multi-standard protection for more safety.
With arc protection class APC 1 and APC 2.

Our BP® Multi Protect Plus collection offers comfort, lightness and modern design in four different colour combinations.

Whether for energy suppliers, municipal utilities, industry or electrical contractors: with a wide range of reliable, lightweight and robust products, your team will receive optimal support in all working environments and weather conditions. The BP® Multi Protect Plus collection is the ideal choice, particularly for **working under voltage**, thanks to its inherent flame retardancy and protection against electric arcs.

6556 Also available in warning orange/
anthracite, see page 78

BP® Multi Protect Plus is available
in both arc protection classes
(APC 1 and APC 2).

Arc protection class (APC) 1:

Particularly lightweight, comfortable and
with high mechanical resistance, this
collection is suitable for activities where
employees are temporarily exposed to
various risks.

Arc protection class (APC) 2:

The collection offers the full safety of
arc protection class 2 in the potentially
vulnerable areas and is very lightweight
even in 2-layer areas.

Putting our energy
into sustainability.

BP® stands for innovation and durability.

BP® has opted to add permanent chemical protection to
the collection items in the warning orange/anthracite colour
scheme (protection duration: at least 30 industrial laundering
washes) in order to reduce the environmental
impact of repeated impregnation.

BP® quality is thus not only a guarantee of the
highest level of protection but also of
environmentally friendly durability.

BP® Multi Protect is available in both
arc protection classes (APC 1 and APC 2) .

Arc protection class (APC) 1:

Thanks to the specially developed fibre combination with cotton, this
collection combines comprehensive protection with high mechanical
resistance, making it particularly suitable for activities in which
employees are temporarily exposed to various risks.

Arc protection class (APC) 2:

Weighing only 480 g/m², the two-layer construction in
high-risk areas is particularly light and, thanks to the thin lining,
offers you exceptional comfort with greater freedom of
movement and a high level of protection.

BP® Welder's Comfort.

Welding with greater safety and comfort.

BP® welding protective clothing makes working with hot metals, under electric arcs and when handling gases noticeably easier.

It combines maximum safety with high wearing comfort – thanks to inherent flame protection, ergonomic cuts and well thought-out details.

For anyone who wants to be optimally protected and work comfortably at the same time when welding.

Precision with personality.

Why does the team around **ophthalmologist Dr Marco Plicht** wear BP®? Because perfection lies in the details!

The team of Dr Marco Plicht is wearing BP® tunics 1762, while he himself wears the BP® coat 1619 (see pages 132 and 165).

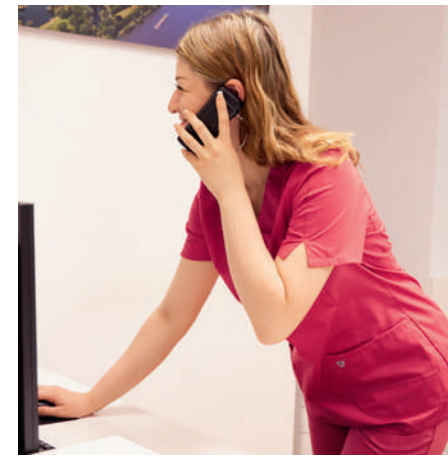

A radiant smile, an in-depth conversation and state-of-the-art technology: in the ophthalmology practice of Dr Marco Plicht, every detail matters – and that also applies to the clothing. That is precisely why the Bonn-based practice team wears the quality and modern look of BP®. We had the opportunity to accompany the team for a day.

This is about more than good vision – it's about the whole person.

At the practice in Bonn's federal district, Dr Marco Plicht is supported by eleven medical assistants and opticians who care for what is probably the most sensitive of all sensory organs: the eye.

Daniela Plicht, a medical assistant and Dr Plicht's wife, has been the heart and soul of the practice for many years – with professional expertise, empathy and outstanding organisational skills. Together with the practice team, she creates an atmosphere in which patients immediately feel welcome and at ease.

Whether routine examinations, acute complaints or long-term care – in this practice, every concern related to vision is in the best of hands. From precise diagnostics to innovative treatment methods, state-of-the-art technology is used here – but only when it offers real added value. "Technology only makes sense when it serves people," says Daniela Plicht. Even more important, however, are the skills that no device can replace: experience, empathy and genuine interest in others. This is where a dedicated dream team works with passion and expertise to always find the best solution.

We need clothing that is as reliable as our team.

For this spirit that defines the team, workwear is needed that can keep up: light, comfortable, functional and of such high quality that it fits perfectly even after long days. "Our BP® outfits have to be as reliable as we are," says Daniela.

For the team, the clothing is more than just workwear – it is an expression of their attitude and a part of their identity, and it has to be so comfortable that you enjoy putting it on in the morning and hardly want to take it off in the evening. Because in the end, it's about a good feeling – for everyone who works here and for everyone who is treated here.

A large part of this work is carried out by the medical assistants and opticians. They are the first point of contact, ensure smooth processes and strike the right balance between high-tech and warmth. Supporting young talent is an integral part of the philosophy: "We want to show young people how fulfilling this profession can be – both professionally and personally," Daniela emphasises.

What Dr Marco Plicht exemplifies – precision, responsibility and appreciation – is reflected not only in the way patients are treated, but also in the choice of workwear.

Marco Plicht, MD, is a specialist in ophthalmology and took over a long-established practice with a 60-year history in 2012. After completing his specialist training with a focus on retinal diagnostics in Duisburg, he worked as a senior physician at the Hochkreuz Eye Clinic in Bonn, specialising in cataract surgery and modern laser procedures.

In his practice, he combines medical precision with personal care. From macular degeneration to glaucoma, diagnostics, therapy and consultation are carried out in line with the latest scientific and technological standards. Patients appreciate his clear communication and his calm manner.

For Marco Plicht, vision is more than a bodily function – it is quality of life.

BP® tunics.

The right fit for every figure.

Whether as a women-only model or unisex, as a pull-on version or with press-stud fastening: the extra-light and soft material blend always delivers an incomparable wearing experience. With up to 17 colours, we meet every taste – or even that of an entire team. Slip it on and feel good!

BP Med & Care®:
Because everybody is different.

BP® lab coats.

More than just a coat.

BP® lab coats are smartly designed to help you through your workday; they offer everything from stretch sleeves (to pull up easily when washing your hands) to stable, intelligent pocket solutions. Whether you work in a lab, pharmacy, doctor's office or clinic: our coats are always the perfect partner. You have the choice between pure cotton or an easy-care fabric blend. For slim fits, also with stretch fabric. A modern look, the highest wear comfort – all inclusive.

HACCP? We've got it under control!

Clean work, strong packaging: the internationally active packaging manufacturer **WERIT** in Altenkirchen relies on the HACCP collection from BP®.

Laura is wearing the BP® work jacket 1682 and the BP® work trousers 1680, see pages 175 and 177.

State-of-the-art machinery, highly precise processes and impressively clean halls: anyone walking through the production facilities of the plastics manufacturer WERIT immediately senses what is possible here – when a team works in sync, motivated and with a strong sense of responsibility. At **WERIT in Altenkirchen**, production takes place at the highest level – from industrial packaging to sensitive components for cleanroom environments. In the production hall where food-grade IBC containers are manufactured, Laura and Abdullah work side by side, focused and well organised despite the warm

ambient temperatures. Every move is precise, every part of the process interlocks seamlessly. “We have to be able to rely on each other,” says Abdullah. “That works with respect – and with clothing that moves with you.” The HACCP workwear from BP® supports him and his colleagues in this: hygienic, functional, comfortable – and designed so that you feel good wearing it all day long. Whether moulding, inspecting or assembling, the clothing provides safety, freedom of movement and a uniform, professional appearance. “You feel taken seriously,” says Laura. “Because you’re part of a great team, part of something important.”

the way people work together. “There are many of us,” says Angela. “And we all pull together.”

What defines this team? Experience. Team spirit. And professional workwear that

A few steps further on – in the cleanroom – calm concentration prevails. The air is filtered, the processes are precise. Here, Angela works on the production of plastic valves. Her job demands pinpoint accuracy. Every millimetre counts. And here too, the right clothing is crucial: “Our HACCP equipment helps us maintain the hygiene standard – and shows that we belong together as a team,” she says.

What can be felt everywhere is pride: pride in what is being created here, and in

WERIT has been developing sophisticated plastic solutions for industry, trade and the food sector for more than 70 years. At its headquarters in Altenkirchen and at eleven additional sites, around 600 employees ensure that quality and hygiene go hand in hand – from industrial packaging such as IBC containers, industrial tanks, plastic containers and pallets to building services components and products for surge protection and electrical installations.

thinks along with you. The HACCP collection from BP® has long since become part of everyday life for them – it protects, supports and connects.

Because in the end, it's not just about products. It's about precision, responsibility – and the good feeling of creating something lasting together.

Our

Request personal advice now:

Eric is wearing the BP® Chef's jacket 1533, see page 189.

Quality is everything.

We cook with Eric Menchon, chef of **Le Moissonnier**, Cologne.

It is early morning in Cologne. The sky still lies dark over the city, while at the wholesale market goods have already been sorted, stacked and inspected for hours. This is where Eric Menchon's day begins today. Not in the kitchen of his restaurant, Le Moissonnier, which has been awarded two Michelin stars among other honours, but at the place where quality has its origin – with the producer, in the selection, in the conversation.

Eric doesn't come to buy. He comes to see. To check, to smell, to ask questions. His gaze is trained, alert and demanding, yet full of respect. One aubergine goes unnoticed, another makes

him pause for a moment. He runs his fingers over the surface, nods, says nothing. This early encounter with the product is a quiet ritual for him – a dialogue between field, producer and kitchen.

"The quality of a dish begins long before it is prepared," says Menchon, who grew up in Pertuis in southern France. For more than 30 years, he has shaped Germany's fine-dining scene and, with his

unmistakable signature, has taken French cuisine to a new level with Moroccan influences.

Gourmets and fellow chefs alike admire his uncompromising attitude as much as his creative precision. Yet anyone who meets him here at

the wholesale market does not encounter a star conductor – but a seeker.

Eric has known many of the traders for decades. He is interested in what comes "before" – long before the product makes its grand appearance on the plate. It's not about exoticism, but about expression. About pure flavour. About vegetables with character. About fruit that is more than just sweet.

Here, amid crates and voices, aromas and colours, his inspiration begins. And he takes something with him: impressions, ideas, perhaps simply the good feeling of having been at the source of flavour. Because for Eric Menchon, quality is not just a matter of craftsmanship. It is an attitude. And sometimes it begins while the city is still asleep.

Nothing goes to waste: good cooking is sustainable.

A little later, a palpable tension already fills Le Moissonnier. In the kitchen, the air is dense – heat from the stove, steam from the stock, quick steps, short commands. Chef Eric Menchon works with intense focus at the centre of his brigade. Not a word too many, not a movement wasted – everything is controlled and precise.

"With good products, nothing gets thrown away. Fish frames, bones and offal are what give a sauce its real depth of flavour," says Eric.

Here, in his realm of stainless steel, ceramics and glowing fire, what began in the morning at the market now comes to fruition. Seconds matter. A fish cooked à point, vegetables with exactly the right texture, sauces shimmering like silk. Menchon's hands move with almost dance-like precision.

Every action carries weight. Every detail counts. He checks, tastes, adjusts – with the relentless passion of a perfectionist.

His brigade – a well-coordinated ensemble of young talents and experienced professionals – follows him with respect and enthusiasm. Work is highly focused, yet there is laughter too. Because anyone who cooks with Menchon knows: this is haute cuisine – at the highest level, but never aloof.

BP® suits us.

"You ask why my team and I wear BP®? Quite simply, this brand is fun: the quality is right and sustainability plays an important role. You simply get more out of the jackets and trousers for longer," says Eric Menchon, then raising his arms, "and on top of that, they're so light and comfortable!"

Thank you, Eric!

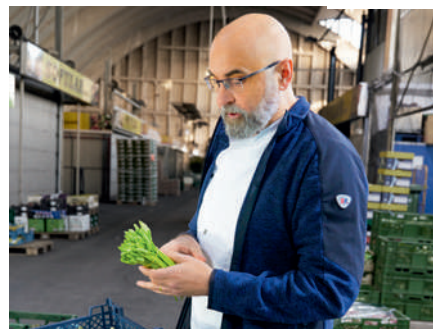

The lacquered red mullet, grilled over charcoal, has even made it into the documentation of the flavour archive of the German Archive of Culinary Heritage at the Saxon State and University Library Dresden.

Eric Menchon, born in 1965 in Aix-en-Provence, is a leading French chef, and his restaurant Le Moissonnier is a culinary institution in Cologne.

As head chef of Le Moissonnier, he has shaped Germany's gourmet scene since 1987 and has been honoured with two Michelin stars as well as numerous awards, including "Chef of the Year". His cuisine combines classic French craftsmanship with modern precision and creative depth. Since 2023, he has been running Le Moissonnier as a modern bistro – and was once again awarded a Michelin star.

Wild asparagus, almost unknown in Germany – but an integral part of Eric's cuisine during the season.

BP® chef's jackets.

A professional appearance, made easy.

Passion and skill are also reflected in clothing. A BP® chef's jacket makes this aspiration visible – with a modern design, a range of colours and a comfortable fit that moves with you.

Ventilation inserts made from BP® mesh ensure a comfortable body climate. The arm lift system supports freedom of movement with every movement. Ergonomically cut sleeves and functional details such as sleeve pockets make everyday work easier.

Supports you in heat, wind, wet and cold.

A comfortable body temperature is essential for good performance. BP® Outdoor, with high-tech solutions, offers the ideal complement to all BP® collections:

- Innovative soft-shell, fleece and membrane solutions for changing climatic conditions
- Windproof
- Waterproof
- Breathable

Discover BP® Outdoor
also online:

Make it **your own**.

**For a great look:
the professional BP® customisation service.**

Names, logos, lettering or motifs – with BP®, your workwear can be professionally customised. This strengthens the sense of belonging within entire teams and, of course, also highlights individual personality.

Whether **direct embroidery**, **embroidered emblems** or **transfer prints** – BP® precisely coordinates the customisation to each product and the desired position on the garment. A wide colour spectrum is available, allowing designs to be realised exactly according to your ideas.

All materials used are of excellent quality and suitable for industrial laundering in accordance with ISO 15797.

Simply ask us how your workwear can best be customised.

For more information,
simply scan the QR code:

Embroidered emblem:

Probably the most frequently used form of refinement – with vibrant colours and razor-sharp contours.

Direct embroidery:

Refinement perfected – like hand embroidery, only far more precise.

Transfer print:

Probablement la finition la plus utilisée – avec des couleurs éclatantes et des contours d’une netteté exceptionnelle.

BP® washability.

Domestic laundering or industrial laundering?

When choosing your workwear, very good washability is essential, because the clothing has to withstand a lot in everyday work and during care. All our BP® products are suitable for domestic laundering, and most are also suitable for industrial laundering. For long-lasting quality, we rely on high-quality materials and careful workmanship.

Industrial laundering – made for the highest standards.

The majority of BP® products carry the **PRO label**. The PRO label indicates that the product meets the requirements of ISO 30023. Tests have been conducted for suitability for industrial laundering in accordance with ISO 15797, namely using washing programmes (1-8), in the tunnel finisher and/or tumble dryer. However, the PRO label does not provide any specific care instructions. Real-life test washes in an industrial laundry should be carried out before using any BP® product.

Possible PRO labels for our products.

Some of our products do **not** carry the PRO label. Nevertheless, they may be washed in an industrial laundry in certain circumstances. Extensive test washes should be carried out on these products especially, to ensure the correct care procedures are used. We classify our products’ appropriateness for industrial laundering as follows:

Low level of appropriateness for industrial laundering: ≤ 40 °C, air drying

Medium level of appropriateness for industrial laundering: ≤ 60 °C, lower drying temperature

High level of appropriateness for industrial laundering: ≤ 75 °C, tumble/tunnel finisher drying

Successful cleaning and the wear and tear on clothing are determined by the following four basic parameters: chemistry, mechanics, temperature, time (Sinner’s Circle). To keep things simple, the classification above only considers the washing and drying temperature. The other factors should naturally also be taken into account when carrying out real-life test washes.

BP® fits.

Cater for every team member and their individual style: what’s your fit?

It’s our mission to develop the perfect BP® fit and the right BP® product for every body type and every style – because everyone is different. With our diverse range of innovative fits, from **relaxed** to **skinny**, we have the perfect style for everyone.

BIERBAUM-PROENEN. SINCE 1788.

PPE Regulation.

Risk assessment procedure

Who?
Why?
What?
When?

Before selecting the PPE, the employer must perform a risk assessment in order to determine the required protection level of the clothing (see Sections 3, 4, 5 of the German Labour Protection Law – ArbSchG). In addition, a practical wash/wear test is essential.

Before carrying out the risk assessment, the user should ask the following four questions:

WHO is to be protected? **WHAT** has to be protected (e.g. torso, head, hands)?
WHY is protection required? **WHEN** is protection to be provided (e.g. for all work carried out)?

The risk assessment takes places in several stages:

1. Preparing the risk assessment
2. Identifying the risks
3. Assessing the risks
4. Establishing specific occupational safety measures
5. Implementing the measures
6. Checking implementation and the effectiveness of the measures
7. Updating the risk assessment

Risks must always be eliminated or reduced directly at source. If risks cannot be sufficiently minimised, additional organisational measures have to be taken, followed by personal measures: the **“TOP principle”**.

T Technical measures, e.g. light barriers on moving machine parts

O Organisational measures, e.g. limiting the amount of time spent working under high physical stress

P Personal measures, e.g. using personal protective equipment

Once the results of the risk assessment are available (which risks occur and which protective effects have to be achieved by the use of PPE), the textile PPE can be determined.

The European Regulation (EU) 2016/425 on personal protective equipment (PPE) has been applied since 21 April 2018. It regulates the terms for the supply of PPE on the market and the free movement within the European Community. In addition, it formulates the fundamental safety requirements that PPE must meet in order to protect the health of the user and ensure his/her safety.

CE stands for Conformité Européenne and means “compliance with EU guidelines”.

Risk categories of personal protective equipment

Every PPE is to be classified according to the risk categories outlined in Annex 1 of the PPE Regulation (EU) 2016/425.

The categorisation is carried out according to the risk from which the PPE is meant to protect.

The following are the three distinct categories:

Category I: simple PPE to protect against minimal dangers (e.g. weatherproof clothing).

This PPE does not require certification by an external inspection body and is not subject to EU supervision.

Category II: PPE to protect against medium risks (e.g. high-visibility clothing).

This PPE is certified by an external inspection body but is not subject to EU supervision.

Category III: complex PPE to protect against lethal hazards and irreversible damage to health (e.g. clothing that is resistant to welding spatters, heat, electric arcs and chemicals).

This PPE must be certified by an external inspection body and is subject to EU supervision.

Items in PPE category III carry the CE mark with a four-figure identification number in the form “CE xxxx”.

This indicates the independent quality-assurance inspection body that regularly checks the PPE clothing for conformity with the fundamental requirements of the applicable regulation.

All BProtected® items meet the requirements of the PPE Regulation (EU) 2016/425.

PPE Regulation (EU) 2016/425

PPE standards & performance levels.

All information is supplied without guarantee.

Food hygiene – workwear in food businesses

As a hygiene clothing solution that is **certified** for risk classes 1-3 **in compliance with the standard DIN 10524**, BP Industrial Food® is an elementary part of your individual HACCP concept.

It meets the requirements specified in the standard for design, function and fabric. For reconditioning in the washing process, the collection was tested for its washing properties in accordance with ISO 15797.

HACCP examines and documents food processing. In this way, errors that lead to a hygiene risk can be identified and prevented. The resulting requirements of work clothing, its reconditioning and storage are regulated in DIN 10524.

Risk classes

DIN 10524 classifies workwear in food businesses into three risk classes based on the respective hygiene risk. These classes define the requirements for the protective function of the clothing in order to prevent contamination of food.

Class 1: low hygiene risk

Class 2: high hygiene risk

Class 3: highest hygiene risk

EN 1149-5

Protective clothing – electrostatic characteristics

Protective clothing against electric charging according to EN 1149 protects the wearer against inflammable discharges. This standard does not apply to the protection against supply voltage.

EN 1149-1

Part 1: test method for measurement of surface resistivity

EN 1149-2

Part 2: test method for measurement of the electrical resistance through a material

EN 1149-3

Part 3: test method for measurement of charge decay

EN 1149-5

Part 5: material performance and design requirements

EN ISO 11611
Klasse 1 or 2
A1 and/or A2

Protective clothing for welding and allied processes

This type of protective clothing is intended to protect the wearer against welding spatters (small spatters of molten metal), brief contact with flames and radiant heat from the arc. Under standard welding conditions, it offers limited electrical insulation against electrical conductors under direct current (up to about 100 V).

The standard specifies two classes that are defined by the amount of welding spatters:

Impact of welding spatters:

Class 1 ≥ 15 drops – protection against less hazardous welding work and situations with few welding spatters and low radiant heat

Class 2 ≥ 25 drops – protection against more hazardous welding work and situations with more welding spatters and higher radiant heat

Flame spread:

A1 = surface flaming, **A2** = edge flaming

Contact with flames A

Testing limited flame spread

A1 = surface flaming, **A2** = edge flaming

Convective heat B

Determination of the heat transmission through materials on application of a flame

B1 4 to < 10 seconds, **B2** 10 to < 20 seconds, **B3** min. 20 seconds

Radiant heat C

Determination of the heat transmission through materials on application of radiant heat

C1 7 to < 20 seconds, **C2** 20 to < 50 seconds, **C3** 50 to < 95 seconds, **C4** min. 95 seconds

Liquid aluminium spatters D

Testing the protective effect with molten aluminium

D1 100 g to < 200 g, **D2** 200 g to < 350 g, **D3** min. 350 g

Liquid iron spatters E

Testing the protective effect with molten iron

E1 60 g to < 120 g, **E2** 120 g to < 200 g, **E3** min. 200 g

Contact heat F

Testing the protective effect with a contact temperature of 250 °C

F1 5 to < 10 seconds, **F2** 10 to < 15 seconds, **F3** min. 15 seconds

Fluid repellence/resistance to the penetration of fluids

30% sulphuric acid (H₂SO₄)

10% sodium hydroxide (NaOH)

O-xylene undiluted

Butan-1-ol undiluted

Type 6: covers and protects at least the torso and lower back (e.g. coveralls, two-piece suits)

Type PB [6]: covers and protects part of the body (e.g. aprons, hoods)

Protective clothing – clothing to protect against heat and flames

The requirements apply to clothing intended for a wide range of applications. This protective clothing has a limited flame spread and provides protection against radiant heat, convective heat and/or contact heat and/or spatters of molten metal.

EN ISO 11612

Protective clothing against liquid chemicals (equipment type 6 and type PB [6])

This type 6 or type PB [6] protective clothing provides protection against slight, low-pressure chemical spatters. This clothing is not suitable as protection against solvents. Suitability for protection against chemicals must be determined individually for each chemical, depending on concentration and temperature.

EN 13034 type 6
or
type PB [6]

EN ISO 13688

Protective clothing – general requirements

This standard is a reference standard for other standards. It specifies general performance requirements for ergonomics, innocuousness, size designation, ageing, tolerance, marking of protective clothing and the information to be supplied by the manufacturer together with the protective clothing. It is only used in combination with other standards containing requirements for specific protective performance.

EN 13758-2

Textiles – protective properties against ultraviolet solar radiation

This type of protective clothing is designed to protect the wearer from carcinogenic UV radiation. It is usually clothing worn outdoors in spring/summer.

According to **EN 13758-1**, the **UV protection factor (UPF)** of all materials used must be measured. The lowest UPF value must be greater than 40 (**UPF 40+**).

Requirements and test methods for clothing designed to protect the wearer from UV radiation are set out in **EN 13758-2**.

Ultraviolet radiation (UVR):

electromagnetic radiation with a wavelength between 180 nm and 400 nm

UV-A: ultraviolet radiation with a wavelength between 315 nm and 400 nm

UV-B: ultraviolet radiation with a wavelength between 280 nm and 315 nm

y1
y2
y3
WP

“y1” corresponds to the thermal resistance class R_{ct} (m² K/W)

class 1 = $0,06 \leq R_{ct} < 0,12$
class 2 = $0,12 \leq R_{ct} < 0,18$
class 3 = $0,18 \leq R_{ct} < 0,25$
class 4 = $0,25 \leq R_{ct}$

“y2” corresponds to the air permeability class AP (mm/s)

class 1 = $100 < AP$
class 2 = $5 < AP \leq 100$
class 3 = $AP \leq 5$

“y3” corresponds to the basic thermal insulation value I_{cler} (optional for class 1-3)

“WP” corresponds to the resistance to water penetration (optional)

If these values have not been tested, the letters “y” and “WP” will be replaced with “x”.

Performance levels:

Level 0: knee protectors that do not provide protection against penetration and that offer force distribution of less than 30 N when tested on a flat, even surface.

Level 1: knee protectors that provide protection against penetration with a force of at least 100 N and that offer force distribution of less than 30 N when tested on a flat, even surface.

Level 1U: knee protectors that provide protection against penetration with a force of at least 100 N and that offer force distribution of less than 30 N when tested on an uneven surface.

Level 2: knee protectors that provide protection against penetration with a force of at least 250 N and that offer force distribution of less than 30 N when tested on an uneven surface.

The knee protection offered by BP® always corresponds to performance level 0 or 1, type 2.

Typ 2: knee pads in combination with clothing

Protective clothing – clothing for protection against cool environments

The standard defines a cool environment as a possible combination of air humidity and wind at temperatures of –5 °C and above.

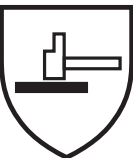

The lower the **thermal resistance class (R_{ct} value)** is, the easier it is for the human-produced warmth to escape through the clothing.

Air permeability (AP)

There are 3 possible classes. Class 1 materials are suitable for low air velocities of less than 1 m/s, such as cool indoor environments, class 2 materials are suitable for air velocities of less than 5 m/s and class 3 materials are suitable for high air velocities ≥ 5 m/s, such as outdoor activities.

EN 14058

EN 14404

Personal protective equipment – knee protection for work in the kneeling position

This standard specifies the knee protection requirements for work in the kneeling position. In addition to the requirements for the labelling of knee protection and manufacturer’s information, it defines test procedures and performance levels.

Knee protection must be safe to use and fit for purpose. It must be designed and manufactured in such a way that it offers protection without endangering the wearer if used according to the manufacturer’s instructions.

ISO 15797

Textiles – industrial washing and finishing procedures for testing workwear

Workwear that meets **ISO 15797** is suitable for industrial laundering. The standard defines methods for assessing the durability of workwear against industrial washing and finishing procedures. It serves as a basis for the development and selection of textiles that must regularly withstand high mechanical and thermal stress.

The results of the durability tests can be read from the PRO label, which summarises the **EN ISO 30023** standard. This standard provides uniform labelling of protective clothing with regard to its suitability for professional industrial laundering using the washing procedures defined in **ISO 15797**.

You can find detailed information about the PRO label on page 228.

EN 17353

Protective clothing – equipment for enhanced visibility in medium-risk situations

The protective clothing is designed for the visual signalling of the wearer in **medium-risk situations**. It is intended to provide protection in all daylight conditions (daytime visibility through fluorescent background material) and/or when illuminated by vehicle headlights or searchlights in the dark (night-time visibility through reflective material).

The clothing is classified into different types.

Type A = 0,24 m² BM
Type AB = 0,24 m² BM + 0,08 m² RM
Type B2/B3 = 0,018 m² / 0,08 m² RM

BM = background material
RM = reflective material

Type A
for daylight

Type B1, B2 or B3
for darkness

Type AB2 or AB3
for daylight
or darkness

EN ISO 20471

High-visibility warning clothing

Protective clothing as a visual warning to draw attention to the wearer in all possible daytime light conditions (daytime visibility thanks to fluorescent background material) and for high-risk areas when illuminated by vehicle headlights in the dark (night-time visibility thanks to reflective material).

The number next to the pictogram (here **x**) indicates the clothing class according to the following overview:

Class 1 = 0,14 m² BM + 0,10 m² RM (e.g. waistcoat)
Class 2 = 0,50 m² BM + 0,13 m² RM (e.g. jacket)
Class 3 = 0,80 m² BM + 0,20 m² RM (e.g. weatherproof jacket)

BM = background material
RM = reflective material

The upper number (here **y**) indicates the resistance to water transmission (resistance to the penetration of water from outside):
4 = high protection, 1 = low protection

The lower number (here **y**) indicates the resistance to water vapour transmission and therefore the degree of water vapour transport through the outer fabric to the outside:
4 = very good transport, 1 = poor transport

Resistance to water transmission (waterproof property):

Class 1 and 2: ≥ 8,000 Pa
Class 3: ≥ 13,000 Pa (≥ 1.3 m water column)
Class 4: ≥ 20,000 Pa

Resistance to water vapour transmission (breathability/R_{et} value):

Class 1: R_{et} > 40
Class 2: 25 < R_{et} ≤ 40
Class 3: 15 < R_{et} ≤ 25
Class 4: R_{et} ≤ 15

R: The letter R means that the finished garment has been tested in the rain tower (optional). If the garment has not been tested, R is replaced by x.

Testing the resistance to arc interference of material and protective clothing using the box-test method and additional calorimetric heat flow measurement to assess the protective effect against second degree burns. Arc protection classes 1 and 2 represent safety requirements that cover actual hazards posed by electric arcs.

Arc protection class (APC) 1 – 4 kA/0.5 s
Arc protection class (APC) 2 – 7 kA/0.5 s

The tested protective clothing is not electrical insulating protective clothing, for example, in compliance with EN 50286:1999 “Electrical insulating protective clothing for work on low-voltage installations”.

Important parameters for the box test:

Protection class 1:	Protection class 2:
• 0.5 seconds	• 0.5 seconds
• Short-circuit current 4 kA	• Short-circuit current 7 kA
• 158 kJ	• 318 kJ
• 135 kJ/m²	• 423 kJ/m²

kA = kiloampere
kJ = electrical arc energy
kJ/m² = incident energy

Protective clothing – protection against rain

Clothing that protects against weather conditions such as rain, snow, fog, humidity and wind.

EN 343

Working under voltage – protective clothing against the thermal hazards of an electric arc

This protective clothing protects the wearer against the thermal effects of a defined electric arc and prevents further burning. The resulting fireball (flames, heat radiation and hot, sometimes glowing metal spatters) is only briefly explosive (0.5 s) but can be very high-energy. The temperature of the flame can rise as high as 9000 °C.

EN 61482-2

EN 61482-2 in conjunction with EN 61482-1-2

EN 61482-1-2 describes a standardised test procedure (box test), EN 61482-2 describes the requirements of the clothing.

The BP® lexicon.

Anti-static fibres

Anti-static fibres are synthetic fibres with hygroscopic properties, which means that they absorb humidity from the air to make them more conductive.

Aramids

Aramids are aromatic polyamides, namely polyamides that contain a benzene ring. They are flame-retardant and resist high thermal loads. As a rule, we differentiate between meta-aramids and para-aramids.

Meta-aramids offer inherent flame protection and resist high thermal loads. They do not melt or drip but carbonise at approx. 285 °C. Meta-aramids withstand temperatures of up to 175 °C without loss of strength and, even at 250 °C, only lose approx. 50% of their original strength. They also offer high chemical resistance and good insulation against heat and cold.

Para-aramids are known for their high tensile strength and robustness and are often used for reinforcement and protective applications such as protective clothing, ballistic materials and fibre-reinforced composites.

Arm-lift system

The arm-lift system ensures outstanding wearing comfort with every arm movement. This allows you to reach up comfortably without exposing your stomach and/or back.

Breathable

In functional textiles, “breathable” refers to a material’s ability to allow water vapour produced by body heat and perspiration to escape to the outside – while rain cannot penetrate membrane-based weather protection clothing.

ATPV (Arc Thermal Performance Value)

The Arc Thermal Performance Value is the result of a test standard applied in Canada/USA, known as the “Arc-man® test”. In this test procedure, a statistical method is used to determine the incident energy with which there is a 50% likelihood of suffering a second-degree burn from an electric arc. The incident energy is measured in cal/cm². The higher the ATPV, the higher the protection against an electric arc.

BP® BodyLanguage

BP® BodyLanguage refers to the specific arrangement of the reflective strips in the BP® Hi-Vis Comfort, BP® Hi-Vis Stretch and BP® Hi-Vis Protect collections. In these collections, the retroreflective material outlines the wearer’s body silhouette. This results in high all-round visibility of the wearer at night, including from above.

BP® circular economy products are partly made from mechanically recycled production cutting waste or from post-consumer recycled material. The waste is collected and processed into new yarn by our partner companies. The recycled yarn is used to manufacture new products.

Cordura® is the brand name for particularly robust, abrasion-resistant fabrics made from nylon fibres. It is characterised by high durability, tear resistance and a long service life, and is often used for reinforcements in especially hard-wearing areas such as knee pad pockets, holster pockets, as well as on seams and pockets in workwear. By using Cordura® in a targeted way, the functionality and service life of the clothing can be significantly increased.

DuraClean is a permanent fabric finish that acts as dirt barrier and that improves stain removal during the washing process.

Easy-care materials that retain their shape even after frequent washing, so that you always look good at work. All of our Med & Care garments share these properties.

The rating EBT50 is the incident energy at which there is a 50% probability of breakopen (damage) of the material. This rating is used in characterisation when, as a result of hole formation, an ATPV rating cannot be determined.

The inside of an item of protective clothing looks like a picture book! And with good reason: the wearer of the clothing must be aware of the properties of the personal protective equipment. Consequently, each item is displayed with symbols that accurately describe the properties of the clothing.

Incident energy limit as an additional rating for the performance of an electric arc. ELIM is a new part of the IEC 61482-1-1, test method 1: determination of the arc rating (ELIM, ATPV and/or EBT) of clothing materials and protective clothing using an open arc.

The ergonomic cut of your work clothing guarantees maximum freedom of movement and perfect wear comfort.

Cordura®

DuraClean

EasyCare

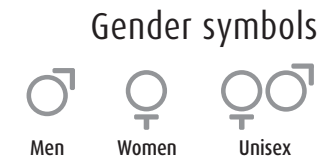

EBT (Energy Break-Open Threshold)

Sew-in labels

ELIM (Incident Energy Limit)

BP® Ergofit

Gender symbols

You can tell which fit is suitable for whom by the gender symbols. BP® offers specially tailored women's fits that are optimally adapted to the female body shape, as well as classic men's fits. In addition, there are unisex models with neutral cuts that are suitable for all genders. The different fits ensure the best possible wearing comfort and freedom of movement, tailored to the individual needs of the wearer.

HACCP

The abbreviation HACCP stands for **H**azard **A**nalysis and **C**ritical **C**ontrol **P**oints. It is a preventive food safety system designed to identify and control risks in the food manufacturing process in order to ensure consumer safety. The HACCP concept is an important building block for safe and hygienic food production.

Manufacturer information

In accordance with the EU Regulation 2016/425, BP® has published an information brochure for each PPE line. This is published in different languages and explains the standards and their specific protection classes for correct use, as well as for care and maintenance. The manufacturer information must be read carefully before using the clothing.

HRC (Hazard Risk Category)

The hazard/risk categories provide a system for classifying the risk associated with electrical hazards, in particular arc flashes, and for determining the required personal protective equipment. The HRC categories are derived from the American NFPA 70E standard for electrical safety and are also used in parts of Europe as a risk assessment.

The classification of garments into four classes is based on the **ATPV value**.

HRC 1: 4-8 cal/cm²

HRC 2: 8-25 cal/cm²

HRC 3: 25-40 cal/cm²

HRC 4: >40 cal/cm²

Individualisation (embroidered logos, transfer prints and emblems)

The application of monograms or trademarks or other modifications to the clothing can impair its certified protective function. For example, a logo or emblem applied to high-visibility clothing can lower the protection class if the required minimum area of fluorescent material is not maintained. For each of its collections, BP® has developed a certified individualisation system to ensure compliance with existing standards. To find out more, please send an e-mail to service@bierbaum-proenen.de.

Information about care

Before each use, the protective effect and intactness of the PPE clothing and its function must be checked and, if necessary, renewed. The item of clothing can only guarantee the required protection in the long term if cared for correctly. You will find care instructions in the BP® manufacturer information and the BP® sew-in labels.

The following examples demonstrate the importance of the right care:

- The use of fabric softeners may impair the flame retardant properties.
- Dirt can considerably reduce the visual impact of high-visibility clothing.
- Greases and oils can have a negative impact on the flammability of welder protection clothing.
- Washing out impregnations can considerably reduce the effect of chemical protection.

Inherent flame resistance

Inherent flame resistance refers to the non-flammability of a material. It means that the material itself is permanently and inherently flame-retardant. So inherent flame resistance is a permanent property and differs from material finishes containing flame-retardant substances.

Declaration of conformity

In the declarations of conformity, which can be downloaded at <https://www.bp-online.com/konformitaetserklaerung>, BP® bindingly confirms that the products meet the requirements of the Regulation EU 2016/425 and the standards which are listed under the certificate number shown. They also list the certification body and the EU supervision body.

Laminate

Laminate is a material comprising several layers. In the textile industry, the laminate consists of several layers of textile, which are often bonded to a membrane. Various types of laminate are available and are suitable for different applications. In the BProtected® collection, two and three-layer laminates are used and have a membrane that is bonded to one or two textile layers.

LOI – also known as the oxygen index – is a value that indicates the flammability of a material, especially plastics. It describes the minimum oxygen concentration in an oxygen-nitrogen mixture at which a material can just continue to burn on its own. Materials with a high LOI value are more resistant to fire and flames.

LOI (Limiting Oxygen Index)

Membrane is the term used for a thin “film” with special properties that ensures that functional textiles in particular are waterproof, windproof and breathable. The waterproof property of the membrane ensures protection against wind and rain; the permeability to water vapour enables the removal of sweat particles, which ensures optimum wear comfort.

Membrane

Mesh is a lightweight, net-like fabric with an open structure that ensures high air circulation and fast drying. It is often made from synthetic fibres such as polyester and is characterised by breathability, low weight and durability. It is used specifically in workwear to create ventilated textile zones and increase wearing comfort. The material is easy to care for, shape-retaining and supports a pleasant body climate.

Mesh

Modacrylic is a modified, permanently flame-retardant acrylic fibre. When modacrylic is exposed to a flame, non-flammable gases are released that displace the surrounding oxygen and so extinguish the flame without leaving any glowing ash residue. The resulting char offers good insulating properties. The flames cannot spread beyond the charred area. Materials cannot melt and so do not stick to human skin.

Modacrylic

Recycled polyester is made from existing plastic, e.g. used PET bottles. We are a partner of Repreve®, a brand manufacturer of sustainable fibres made from recycled materials. Using these fibres, we produce sustainable workwear.

Recycled polyester

Reflective strips

Repair

R_{et} value

Soft-shell fabric

STRETCH

Stretch gusset

Within the BProtected® collection, BP® uses different reflective strips that differ, in particular, in terms of the three technologies outlined below. All three technologies are suitable for industrial laundering as per ISO 15797.

Glass-bead technology:

Thousands of tiny glass beads are applied to a backing fabric and reflect incident light back to the source. Thanks to glass-bead technology, the strips are relatively lightweight and thin. However, they offer outstanding reflection values. Segmented reflective strips are particularly suitable for stretch textiles, e.g. T-shirts, and are also based on glass-bead technology.

Segmented reflective strips:

Segmented reflective strips, which are manufactured based on glass-bead technology, are glued directly onto the fabric. This makes them very lightweight and particularly suitable for use on elastic materials.

Microprism technology:

Thousands of tiny microprisms are applied to PVC and reflect incident light back to the source. These microprisms are particularly resistant to dirt and wear as they are protected by an additional layer of plastic. The reflective values when wet and under poor weather conditions are particularly good.

Incorrect repairs can destroy the certified protective effect of the clothing. Only original materials may be used for replacements or repairs.

The R_{et} value (Resistance to Evaporative Heat Transfer) is used as a measure of breathability. It indicates the resistance of a material to water vapour transmission. The lower this value, the more “breathable” the material (see also En 343).

Soft-shell fabric is the material from which functional textiles are produced for sports, leisure and work (e. g. jackets or outdoor clothing). Soft-shell fabrics often comprise two or three layers of material that are bonded firmly together (two or three-layer laminate); the middle layer often consists of a windproof, waterproof and breathable membrane. A soft-shell jacket is an ideal compromise between a fleece jacket and a raincoat. In the event of light rain and snowfall, it protects against moisture, cold and wind and, at the same time, is comfortable to wear thanks to the soft inside fleece and a sophisticated combination of two to three layers of fabric. Soft-shell jackets are not suitable for wear in incessant rain.

The high stretch content provides great comfort and optimum freedom of movement.

The stretch gusset is an elastic insert in workwear that increases freedom of movement and improves wearing comfort. It is used, for example, at the sides of the waistband area of bib overalls to provide more flexibility.

TENCEL™ lyocell fibres are derived from the natural raw material wood and support a naturally dry feel through moisture regulation. Compared to generic lyocell fibres, the fibres are produced with at least 50% less CO₂ emissions and water consumption.* BP® products with TENCEL™ lyocell meet the requirements of ISO 15797 and are therefore suitable for industrial laundering. TENCEL™ is a trademark of Lenzing AG. *Results are based on LCA standards (ISO 14040/44) and are available via Higg MSI (version 3.8).

Virgin polyester is the original form of polyester and is often referred to as “new material”, in contrast to recycled polyester, which is made from existing plastic.

Viscose is a regenerated cellulose fibre made from natural raw materials such as wood. It has a high moisture absorption capacity and a soft, pleasant feel. The material is breathable and ensures good wearing comfort. In workwear, viscose is used to provide functionality and a pleasant feel against the skin.

Viscose FR* is a naturally flame-retardant cellulose fibre. It offers protection against heat in a wide variety of different work areas and features maximum fibre strength. It has very good heat-insulation properties, is permanently flame-retardant, environmentally friendly and offers outstanding wear comfort *FR = flame retardant

Functional textiles on which water beads up and does not penetrate the fabric are described as water-repellent. In BP® clothing, this function protects against moisture, increases wearing comfort in light rain or splashing water, and does not impair breathability.

The waterproof property of functional textiles is often quoted in “mm water column”. This represents a measurement of the water pressure that a water column of a certain height exerts on materials without the water being able to pass through them. A value of 1,000 mm water column corresponds to a pressure of approximately 0.1 bar. Standard EN 343 requires a waterproof property of at least 1300 mm in class 3 and of at least 2000 mm in the highest class (class 4).

Functional textiles that reliably prevent wind from penetrating are described as windproof. Windproofness effectively prevents chilling, increasing wearing comfort when working outdoors.

The clothes must be stored and transported in a dry, dust-free place away from direct sunlight. Excessively compressed storage should be avoided in order to prevent creasing.

BP® commissions an independent inspection body, also known as a notified body, to carry out EU-type examinations confirming that the PPE model in question complies with the applicable provisions of **EU Regulation 2016/425**. The products shown in the catalogue were tested and certified by the following inspection bodies:

- STFI** – Sächsisches Textilforschungsinstitut e.V., Annaberger Str. 240, 09125 Chemnitz, Germany
- Hohenstein Laboratories** GmbH & Co. KG, Schlosssteige 1, 74357 Bönningheim, Germany
- ÖP** – Öffentliche Prüfstelle für das Textilwesen der Hochschule Niederrhein GmbH, Richard-Wagner-Str. 97, 41065 Mönchengladbach, Germany
- IFA** – Institut für Arbeitsschutz der Deutschen Gesetzlichen Unfallversicherung, Alte Heerstr. 111, 53754 Sankt Augustin, Germany

BP[®] mission.

We believe in people who give their best every day. People who follow their vocation and pursue their work with passion, pride, and competence.

Since 1788, our mission is to offer these people an attractive and professional workwear that makes a noticeable difference for them.
