

**Protective clothing in compliance with EN 17353:
Safety to the max. An upgrade for your workwear.**
Enhanced visibility equipment for medium-risk conditions.

Protective clothing in compliance with EN 17353: Safety to the max. An upgrade for your workwear.

Enhanced visibility equipment for medium-risk conditions.

- Wearing clothing with reflective properties hugely increases your safety – even in locations where wearing high-visibility clothing is not mandatory.
- Many companies that are not required to comply with standard EN ISO 20471 still want their employees to wear work clothing with additional features for enhanced visibility.
- The EN 17353 standard is a good alternative, as it defines requirements for daytime and nighttime medium-risk activities in terms of reflective materials and properties, as well as the minimum sizes and positioning of reflective elements on clothing.
- For logistics, industry and municipal services, these elements provide enhanced visibility at dusk, in poor lighting and in limited visibility conditions.
- BP® offers standard-compliant finishing in accordance with EN 17353 Type B2, adding reflective strips to the sleeves and trouser legs of selected collections.

Industrial laundering according to ISO 15797

Standard	Risk level	Factors influencing the risk level		Visibility level	Classification	Material in m²
		Speed of the vehicle	Road user			Retroreflective material
EN 17353	Medium risk	≤ 15 km/h ≤ 60 km/h	passive active	Enhanced visibility <ul style="list-style-type: none"> - Nighttime visibility - Visibility from all sides - Design for movement recognition if applicable (not necessarily around the torso) - Quantity and quality for day and night (not necessarily EN ISO 20471) - No gadgets 	Type B2	0.018

1822-565
BP® Robust work jacket
Example with 1 reflective strip (5 cm) on each arm

1822-565
